Potable Water Service Line Inventory

All community and non-transient, non-community water systems must submit to Colorado Department of Health and Environment an initial service line inventory, identifying the material on both the utility-owned and customer-owned portions of all service lines, by October 16, 2024.

The city of Thornton is pleased to announce that no lead service lines have been identified within the utility service area.

Beginning in 2021, city of Thornton utility staff and subcontractors have inspected every utility-owned and customer-owned service line. In addition, city of Thornton development specifications have never allowed lead service lines as a material to convey water within service lines.
